

CLAYTON OFF ROAD  
COR-2909335  
JEEP WRANGLER \*393\* 3.5" PREMIUM LIFT KIT (2018 +, JL)

NOTES: This product may require general welding, fabrication and automotive mechanic skills. Welding should only be done by a competent welder. Clayton Off Road implies no guarantees or warranties and is not liable for improper installation. Some grinding and fitment may be required when installing this product. Every vehicle varies slightly and some fabrication may be required. For more information please visit our website.

Recommended starting lengths for track bars and control arms. These lengths can be adjusted as needed for caster angle, drive shaft angles and tire clearance. Please make sure to not exceed the maximum length of the control arms or track bars.

Lift Height > Suspension Component	Stock	2 Door 1.5" Lift	2 Door 2.5" Lift	2 Door 3.5" Lift	2 Door 4.5" Lift	4 Door 1.5" Lift	4 Door 2.5" Lift	4 Door 3.5" Lift	4 Door 4.5" Lift

Refer to individual product part number instructions.

Step 1: Position front of vehicle on jack stands or complete vehicle on lift.

Step 2: Support front axle.

Step 3: Remove front tires.

Step 4: Loosen front track bar bolts.

Step 5: Remove heat shields and loosen upper and lower control arm bolts.

Step 6: Loosen front upper and lower control arm bolts.

Step 7: Remove front sway bar links.

Step 8: Remove front shocks.

Step 9: Remove two brake line clip bolts on both sides.

Step 10: Unclip and disconnect all wires going to the front axle.

Step 11: Lower front axle.

Step 12: Remove front springs.

Step 13: Remove front upper and lower control arms on one side.

Step 14: Install front lower control arm part number COR-1809100 with curve facing in for tire clearance.

Step 15: Install front upper control arm part number COR-1809101 with curve away from the frame.

Step 16: Repeat steps 13 and 15 on other side.

Step 17: Remove front track bar.

Step 18: Install front track bar part number COR-4509100.

Step 19: Install front bump stops part number COR-1408101.

Step 20: Install front springs part number COR-1508450.

Step 21: Install front shocks.

Step 22: Install front sway bar links part number COR-5109100.

Step 23: Install two brake line clip bolts on both sides.

Step 24: Clip and connect all wires going to the front axle.

Step 25: Install front tires.

Step 26: Position rear of vehicle on jack stands or complete vehicle on lift.

Step 27: Support rear axle.

Step 28: Remove rear tires.

Step 29: Loosen rear track bar bolts.

Step 30: Loosen rear upper and lower control arm bolts.

Step 31: Remove brake line clip bolts on both sides and unbolt parking brake cables.

Step 32: Unclip and disconnect all wires going to the rear axle.

Step 33: Remove rear sway bar links.

Step 34: Remove rear shocks.

Step 35: Lower rear axle.

Step 36: Remove rear springs.

Refer to individual product part number instructions.

Step 37: Remove rear upper and lower control arms on one side.

Step 38: Install rear lower control arm part number COR-1809102 .

Step 39: Install rear upper control arm part number COR-1809103.

Step 40: Repeat steps 37 and 39 on other side.

Step 41: Remove rear track bar.

Step 42: Install rear track bar part number COR-4509110.

Step 43: Install rear bump stops part number COR-1409201.

Step 44: Install rear springs part number COR-1509351.

Step 45: Install rear shocks.

Step 46: Install rear sway bar links part number COR-5109110.

Step 47: Install brake line clip bolts on both sides and bolt in parking brake cables.

Step 48: Clip and connect all wires going to the rear axle.

Step 49: Install rear tires.

Step 50: With vehicle sitting at ride height center both front and rear axles under the vehicle by adjusting the front and rear track bars.

Step 51: In the next 2 steps it is very important to set the caster and pinion angle with a jack with the bolts at one end removed then adjust the length of the upper control arms so they are loaded up equally when the jack is removed.

Step 52: Adjust length of front upper arms to have a caster angle of 4.8 degrees. This angle should be within plus or minus 1.00 degrees.

Step 53: Adjust rear pinion angle to keep lower spring perches aligned with upper spring perches. On 2 door models it will be necessary to roll the pinion up to avoid the rear drive shaft from binding on full droop.

Step 54: Tighten all track bar and control arm bolts.

Step 55: Tighten all track bar and control arm jam nuts.

Clayton Off Road  
COR-1809100  
Jeep Wrangler Short Front Lower Control Arms (2018 & Up, JL)

NOTES: This product may require general welding, fabrication and automotive mechanic skills. Welding should only be done by a competent welder. Clayton Off Road implies no guarantees or warranties and is not liable for improper installation. Some grinding and fitment may be required when installing this product. Every vehicle varies slightly and some fabrication may be required. For more information please visit our website.

Refer to pictures below.

Step 1: Remove old control arm on one side.

Step 2: Remove shock bolt.

Step 3: Position axle.

Step 4: Measure length from axle side mount to frame side mount.

Step 5: Adjust control arm to length and run jam nut up to control arm tube insert.

Step 6: Install new control arm with adjustment end on frame.

Step 7: Install control arm bolts and nuts.

Step 8: Torques both bolts to 190 ft-lb.

Step 9: Tighten jam nut using a 46mm or 1-13/16" wrench.

Step 10: Make sure Johnny Joint at frame side is centered in bracket.

Step 11: Bolt brake line clip to control arm.

Step 12: Install new shock bolt, nut and washer.

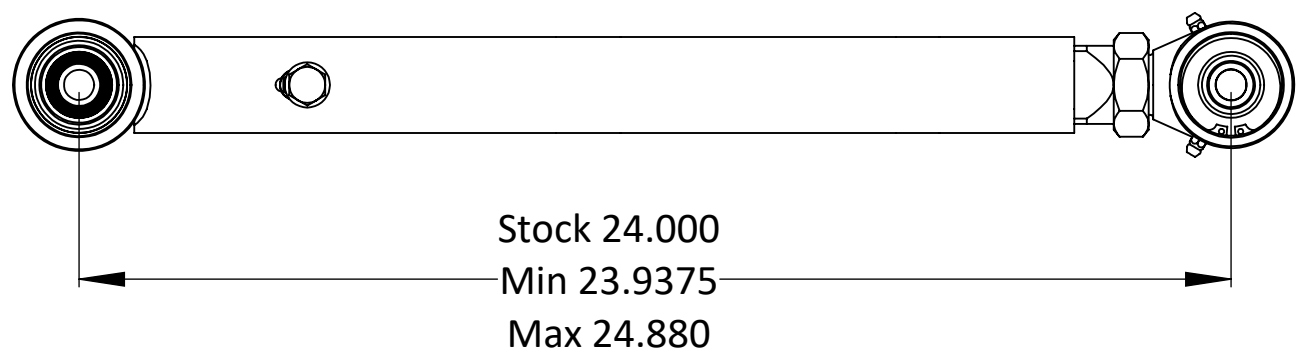

Step 13: Repeat steps 1 to 12 on other side.

Frame Side  
Wrench Size 21 & 24mm  
Torque 190 ft-lb

Axle Side  
Wrench Size 21 & 24mm  
Torque 190 ft-lb

Refer to drawing below for minimum and maximum lengths.

Jeep Wrangler Short Front Upper Control Arms (2018 & Up, JL)**

NOTES: This product may require general welding, fabrication and automotive mechanic skills. Welding should only be done by a competent welder. Clayton Off Road implies no guarantees or warranties and is not liable for improper installation. Some grinding and fitment may be required when installing this product. Every vehicle varies slightly and some fabrication may be required. For more information please visit our website.

Refer to pictures below.

Step 1: Support axle from rotating, a floor or bottle jack works well.

Step 2: Remove old control arms.

Step 3: Set caster to 4.5 to 5.5 degrees by adjusting the height of the jack.

Step 4: Install arms at frame side, arm should bow away from frame.

Step 5: Adjust control arm to length so that bolts can easily be installed at axle end.

Step 6: Remove jack, and check caster.

Step 7: Torque all bolts to 80 ft-lb.

Step 8: Tighten jam nut using a 1-7/16" wrench.

Step 9: Make sure Johnny Joint at frame side is centered in bracket.

Refer to drawing below for minimum and maximum lengths.

**JEEP WRANGLER 1.25" TALL FRONT BUMP STOPS (2007-2018+, JK/JL/JT)**

NOTES: This product may require general welding, fabrication and automotive mechanic skills. Welding should only be done by a competent welder. Clayton Off Road implies no guarantees or warranties and is not liable for improper installation. Some grinding and fitment may be required when installing this product. Every vehicle varies slightly and some fabrication may be required. For more information please visit our website.

Refer to picture below.

Instructions for Wrangler models JK/JL and Gladiator.

Step 1: Remove spring.

Step 2: Center bump stop on lower coil bucket.

Step 3: Mark hole location on lower coil bucket.

Step 4: Drill  $13/32$ " hole in lower coil bucket.

Step 5: Insert bump stop into spring and install spring.

Step 6: Install nut and tighten bolt.

Every vehicle varies slightly and some fabrication may be required. For more information please visit our website.

Refer to pictures below.

Step 1: Remove old sway bar end links.

Step 2: Make sure vehicle is at ride height.

Step 3: Refer to the spread sheet below to determine how much to cut from each end of threaded rod.

Step 4: Cut threaded rod.

Step 5: Deburr end of threaded rod.

Step 6: Install two jam nuts on each end of rod.

Step 7: It maybe necessary to lock the 2 jam nuts against each other to thread rod end on.

Step 8: The rod end with no stud in it goes on the passenger side axle, Use a aluminum spacer on each side of this rod end.

Step 9: Install sway bar links with the studs facing in.

Step 10: Make sure all rod ends are centered.

Step 11: Torque all nuts, bolts and jam nuts to 60 ft-lb.

Step 12: Cycle the suspension through its full travel, check for binding and adjust rod length if needed.

Step 13: Do not exceed maximum length.

Step 14: Make sure to keep at least 3/4" of thread engagement with rod end.
