JEEP CHEROKEE PRO SERIES 3 LINK FRONT LONG ARM UPGRADE KIT (1984-2001, XJ)

NOTES: This product requires general welding, fabrication and automotive mechanic skills. Welding should only be done by a competent welder. Clayton Off Road implies no guarantees or warranties and is not liable for improper installation. Some grinding and fitment may be required when installing this product. Every vehicle varies slightly and some fabrication may be required. For more information please visit our web site.

Refer to individual product part number instructions.

Step 1: Install part number COR-2101300 3 piece cross member.

Step 2: Chock front and back of the driver side front wheel.

Step 3: Remove upper and lower control arms.

Step 4: Remove lower control arm bracket on frame side.

Step 5: Install one of part number COR-1900301 lower control arm.

Step 6: Install part number COR-1900007 upper control arm.

Step 7: Repeat steps 2 to 5 on the passenger side.

Notes: All final adjustments and tightening of hardware should be done with the vehicle sitting at ride height. Care should be taken to set caster and track without binding up the suspension.

**CLAYTON OFF ROAD
COR-1100106
JEEP 3 LINK BRIDGE (1984-2006, TJ/LJ/XJ/ZJ)**

NOTES: This product may require general welding, fabrication and automotive mechanic skills. Welding should only be done by a competent welder. Clayton Off Road implies no guarantees or warranties and is not liable for improper installation. Some grinding and fitment may be required when installing this product. Every vehicle varies slightly and some fabrication may be required. For more information please visit our website.

Refer to picture below.

Step 1: Remove axle from vehicle.

Step 2: Remove drive side upper control arm bushing.

Refer to picture below.

Step 3: Trim driver side upper control arm mount so that you have 2 posts that fit into the 2 cut outs in the top of the bridge about an 1/8" below the top of the bridge.

Step 4: Bevel the bridge where the axle tube goes so it clears the welds on the spring perch.

Step 5: Test fit the bridge on the axle.

Note: This is a rough dimensions to use for trimming the mount. The 1.011" dimension is from the top of the mount to the top of the truss. Remember the post should be an 1/8" below the top of the bridge for welding.

Refer to picture below.

Step 6: Weld 2 posts into cut outs.

Step 7: Weld bridge to axle tubes and spring perches.

Step 8: Weld 4 corners of the truss.

Step 9: Weld optional 3 link mount part number COR-1130110 to bridge on all sides inside and out.

Step 10: Paint axle.

Step 11: Install axle in vehicle.

**CLAYTON OFF ROAD

JEEP DANA 30 TRUSS (1984-2006, TJ/LJ/XJ/ZJ)**

NOTES: This product may require general welding, fabrication and automotive mechanic skills. Welding should only be done by a competent welder. Clayton Off Road implies no guarantees or warranties and is not liable for improper installation. Some grinding and fitment may be required when installing this product. Every vehicle varies slightly and some fabrication may be required. For more information please visit our website.

Refer to picture below.

Step 1: Remove axle from vehicle.

Step 2: Remove passenger side upper control arm mount.

Step 3: Remove drive side upper control arm bushing.

Refer to picture below.

Step 4: Trim driver side upper control arm mount so that you have 2 posts that fit into the 2 cut outs in the top of the truss about an 1/8" below the top of the truss.

Step 5: Bevel the truss where the axle tube goes so it clears the welds on the spring perch.

Step 6: Test fit the truss and gusset on the axle. It maybe necessary to clamp it down so the gusset fits tight to the axle tube.

Note: This is a rough dimensions to use for trimming the mount. The 1.371" dimension is from the top of the mount to the top of the truss. Remember the post should be an 1/8" below the top of the truss for welding.

Refer to picture below.

Step 8: Make 5 1" welds along gusset to axle tube on both sides.

Step 9: Make 5 1" welds along top of gusset on both sides.

Refer to picture below.

Step 10: Weld 3 keyways.

Step 11: Weld 2 posts into cut outs.

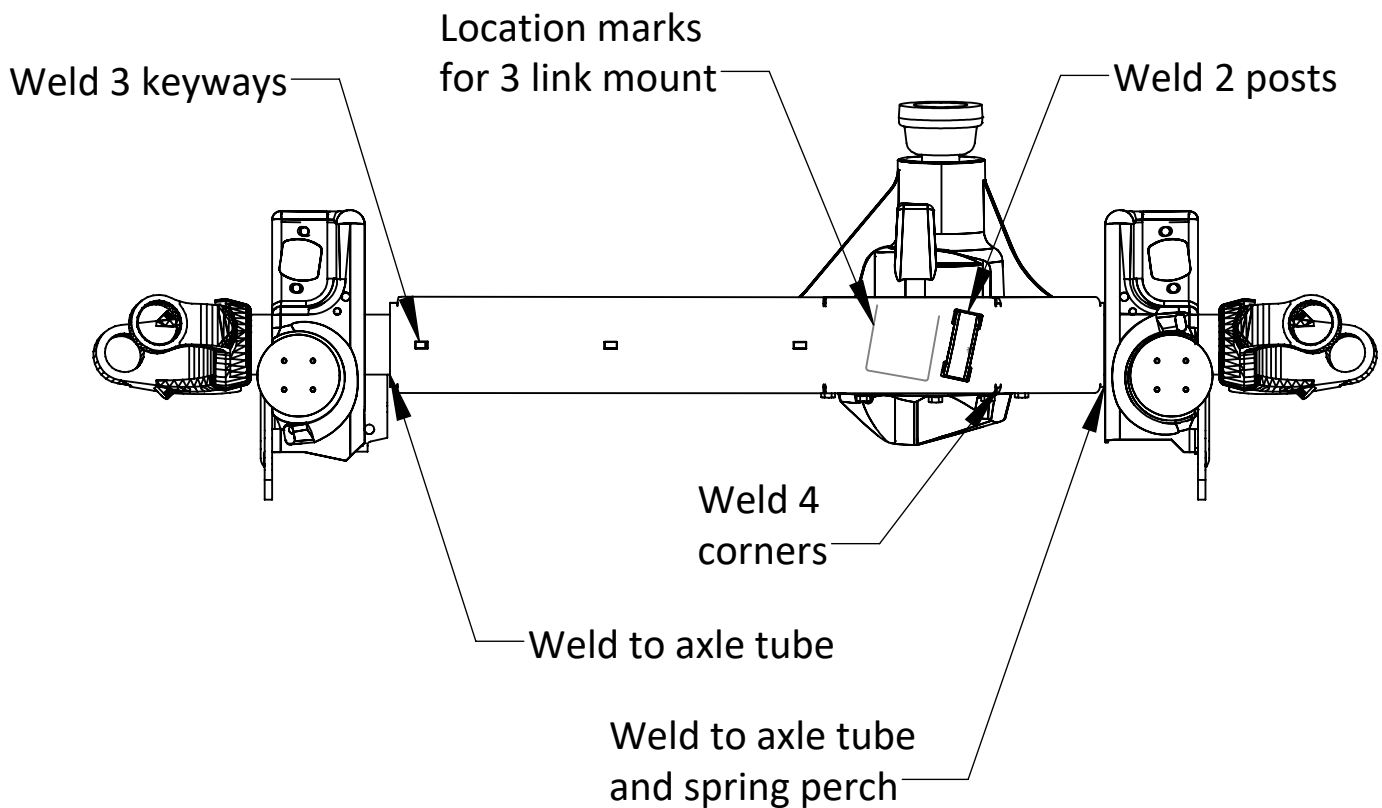

Step 12: Weld truss to axle tubes and spring perches.

Step 13: Weld 4 corners of the truss.

Step 14: Weld optional 3 link mount part number COR-1130110 to truss on all sides inside and out.

Step 15: Paint axle.

Step 16: Install axle in vehicle.

Step 8: Make 5 1" welds along gusset to axle tube on both sides.

Step 9: Make 5 1" welds along top of gusset on both sides.

Refer to picture below.

Step 10: Weld 3 keyways.

Step 11: Weld 2 posts into cut outs.

Step 12: Weld truss to axle tubes and spring perches.

Step 13: Weld 4 corners of the truss.

Step 14: Weld optional 3 link mount part number COR-1130110 to truss on all sides inside and out.

Step 15: Paint axle.

Step 16: Install axle in vehicle.

CLAYTON OFF ROAD

COR-1130300

JEEP CHEROKEE & GRAND CHEROKEE 3-LINK MOUNT KIT (1984-2001 XJ,ZJ)

NOTES: This product may require general welding, fabrication and automotive mechanic skills. Welding should only be done by a competent welder. Clayton Off Road implies no guarantees or warranties and is not liable for improper installation. Some grinding and fitment may be required when installing this product. Every vehicle varies slightly and some fabrication may be required. For more information please visit our website.

2101300 Jeep Cherokee Front 3 Piece Cross Member (1984-2001 XJ)

Step 1: Locate 3-link cross member bracket as shown below.

Step 2: Check fit of control arm in bracket.

Step 3: Tack bracket in place.

Step 4: Weld bracket in place on 3 sides.

Step 5: Install cross member refer to instructions for part number 2101300.

Step 6: Locate 3-link axle bracket on optional part numbers 1100106 bridge , 1130100, 1130101 trusses or axle housing.

Step 7: Check fit of control arm in bracket.

Step 8: Tack bracket in place.

Step 9: Weld bracket in place on 3 sides.

**CLAYTON OFF ROAD
COR-1900007
JEEP PRO SERIES FRONT UPPER CONTROL ARM (1984-2004 TJ/LJ/XJ/ZJ)**

NOTES: This product may require general welding, fabrication and automotive mechanic skills. Welding should only be done by a competent welder. Clayton Off Road implies no guarantees or warranties and is not liable for improper installation. Some grinding and fitment may be required when installing this product. Every vehicle varies slightly and some fabrication may be required. For more information please visit our website.

Refer to drawing view below.

Step 1: Support axle from pivoting on lower control arms. (A bottle jack works well)

Step 2: Make sure vehicle is at ride height and track is set.

Step 3: Install new upper control arm using new hardware.

Step 4: This arm has left and right hand threads for easy adjustment.

Step 5: Adjust caster angle to specifications below by turning the control arm tube.

Step 6: Tighten bolts.

Step 7: Tighten jam nuts. (We recommend a 1 7/16" combination wrench for this. We also recommend cutting the box end off the wrench and getting a three foot piece pipe to put over the end of the wrench for leverage. Inserting a large screw driver between the joint body and the mount will hold the housing joint straight.)

Step 8: The joints are pre greased so initial greasing is not required. (We do recommend greasing the joints every time you change your oils or grease other components on your vehicle. Use a hand grease gun not a pneumatic grease gun.)

We recommend a caster angle on the drivers side to be between 5 and 6 degrees. (Top of the inner knuckle tipped towards the rear of the vehicle)
In certain cases caster angles as low as 3 to 4 degrees are possible to get better drive shaft angles however this may effect the handling of the vehicle.
Too much caster change from the factory settings may also cause the coil springs to bow and effect clearances on the steering linkages. Keep length within the minimum and maximum lengths shown below.

CLAYTON OFF ROAD

COR-1900301

JEEP PRO SERIES LONG FRONT LOWER CONTROL ARMS (1984-2006 TJ/LJ/XJ/ZJ)

NOTES: This product may require general welding, fabrication and automotive mechanic skills. Welding should only be done by a competent welder. Clayton Off Road implies no guarantees or warranties and is not liable for improper installation. Some grinding and fitment may be required when installing this product. Every vehicle varies slightly and some fabrication may be required. For more information please visit our website.

Refer to drawing view below and individual product part number instructions.

Step 1: Set one arm as close to recommended length as possible with grease fitting down.

Step 2: Set second arm to same length with grease fitting down. (Use two 9/16" bolts in each end of both arms.)

Step 3: Bolt control arm into cross member.

Step 4: Bolt control arm into axle.

Step 5: Repeat steps 3 and 4 on other side.

Step 6: Tighten bolts after vehicle is sitting at ride height.

Step 7: Tighten jam nuts. (We recommend a 46 mm or 1 13/16" combination wrench for this. We also recommend cutting the box end off the wrench and getting a three foot piece pipe to put over the end of the wrench for leverage. Inserting a large screw driver between the joint body and the mount will hold the housing joint straight.)

Step 8: The joints are pre greased so initial greasing is not required. (We do recommend greasing the joints every time you change your oils or grease other components on your vehicle. Use a hand grease gun not a pneumatic grease gun.

Step 9: Remove grease fittings and install set screws.

Recommended control arm length for 4.0" to 7.0" of lift is 36".

Some adjustment of this measurement maybe performed for special applications as long as the length stays within the minimum and maximum lengths shown below.

**CLAYTON OFF ROAD
COR-2101300
JEEP GRAND CHEROKEE FRONT 3-LINK 3 PIECE CROSS MEMBER (1984-2001, XJ)**

NOTES: This product requires general welding, fabrication and automotive mechanic skills. Welding should only be done by a competent welder. Clayton Off Road implies no guarantees or warranties and is not liable for improper installation. Some grinding and fitment may be required when installing this product. Every vehicle varies slightly and some fabrication may be required. For more information please visit our web site.

Refer to drawing views.

Step 1: Assembly cross member as shown.

Step 2: If installing a 3-link system refer to part number 1130300 instructions.

Step 3: Support vehicle drive line.

Step 4: Remove old cross member.

Step 5: Clean frame for welding.

Step 6: We provide new mounting hardware for bolting the new cross member in place.

Step 7: If you have stubs in the uni-body use the washers and nuts provided.

Step 8: If you have holes in the uni-body use the socket head cap screws provided.

Step 9: Lightly bolt new cross member into place.

Step 10: Square and center cross member.

Step 11: Tighten bolts.

Step 12: Weld both sides along the front, back & end.

Step 13: Bolt transmission mount in.

Step 14: Weld end caps on with access holes aligned.

Step 15: Paint cross member.
